Introduction

Pine Genome Reference Sequence Project

- One main objective of a genetic map is to help to order scaffolds in the assembly
- Previous plant genome projects of several plants used genetic maps to validate and improve quality of their genome (Watermelon (Ren et al. 2012); Banana (D'Hont et al. 2012); Sunflower (Grassa et al.2012); *Populus trichocarpa* (Tuskan et al. 2006)).

Selected Mapping Progeny

Base pedigree

QTL pedigree

**92 progeny
(base)**

**110 progeny
(base_ver)**

**180 progeny
(qtl)**

**307 progeny
(qtl_ver)**

High-Density consensus map

Selected Markers

- Isozyme
- Random Amplification of Polymorphic DNA (RAPD)
- Restriction Fragment Length Polymorphism (RFLPs)
- Expressed Sequenced Tags (ESTs)
- Single Sequence Repeat (SSRs)
- Single Nucleotide Polymorphism (SNPs)

4168 total makers

~ 90% SNPs

- ***Objective 2 – Discover alleles for 5000 candidate genes using a high-throughput sequencing pipeline at Agencourt Bioscience Corporation.***

High Quality Validated Subset of ADEPT2 Loci

- 5599 of the 7500 loci have one or more assembled read pairs that meet our quality criteria
- Total base count: 22,622,243
- Average successful sequence count per locus: 11.5
- Average phred/phrap quality score: 80.6 (and we currently reject any assembled read pair if any of its bases has a quality score below 30, among other criteria).

Genotyping

3750 SNPs

- 1 GoldenGate™ assay 384 SNPs

- 3 Infinium assay (between 7K to 8K SNPs on each)

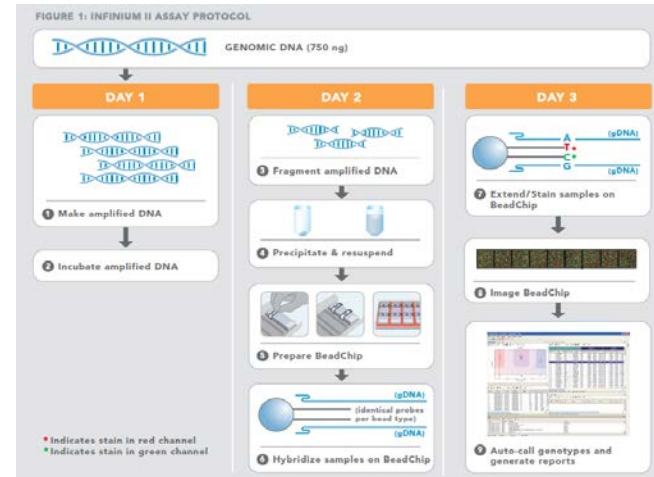

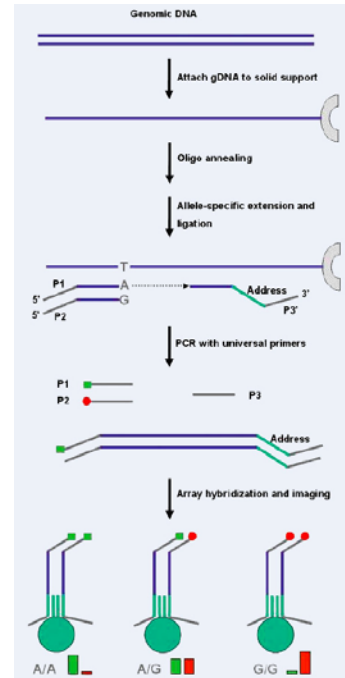

Success rate 63%

- Isozyme
- RAPD
- RFLPs
- EST
- SSR

Several published sources of genetic markers

Devey et al. 1994; Sewell et al. 1999; Brown et al. 2001,2003; Sewell et al. 2002; Krutovsky et al. 2004; Eckert et al. 2009; Echt et al. 2011

GoldenGate™ assay

Infinium assay

Map Construction

- 689 progeny
- Number total markers 4168

- JoinMap® 4.1

The ML algorithm for outbred species does map integration over the two separate parental maps by averaging and interpolation (Van Ooijen et al. 2011)

- Four different sex-averaged maps

- Consensus map

Map integration over multiple segregating populations is done by regression mapping, as in all previous JoinMap versions. (Van Ooijen et al. 2011)

Summary High-Density consensus map

Linkage group	Markers	Genetic Distance (cM)	Unique position	Largest GAP
1	222	122.114	214	5.819
2	200	127.63	198	10.799
3	184	126.259	179	8.602
4	186	92.068	181	2.904
5	198	108.171	186	6.409
6	195	127.449	191	7.634
7	222	124.945	213	2.681
8	228	127.618	218	7.291
9	189	123.315	185	4.628
10	206	110.846	201	4.394
11	232	151.57	225	5.855
12	194	116.83	191	5.302
Total	2456	1458.815	2382	

1458cM/2382markers= **0.612433 cM**

It is the most saturated map in *Pinus taeda* to date

All pines have 12 pairs of chromosomes (Saylor 1961) with an estimated total map length of 1500 cM (Remington et al. 1999)

Agriculture

Summary High-Density consensus map

- 2298 SNPs markers mapped
- 156 others markers (SSR, RFPLs, EST)

- **70% (1633 SNPs)** are ADEPT2 loci
- 1428 SNPs are in annotated gene
- ~33% (463) present a Gene Ontology Function

GO Function

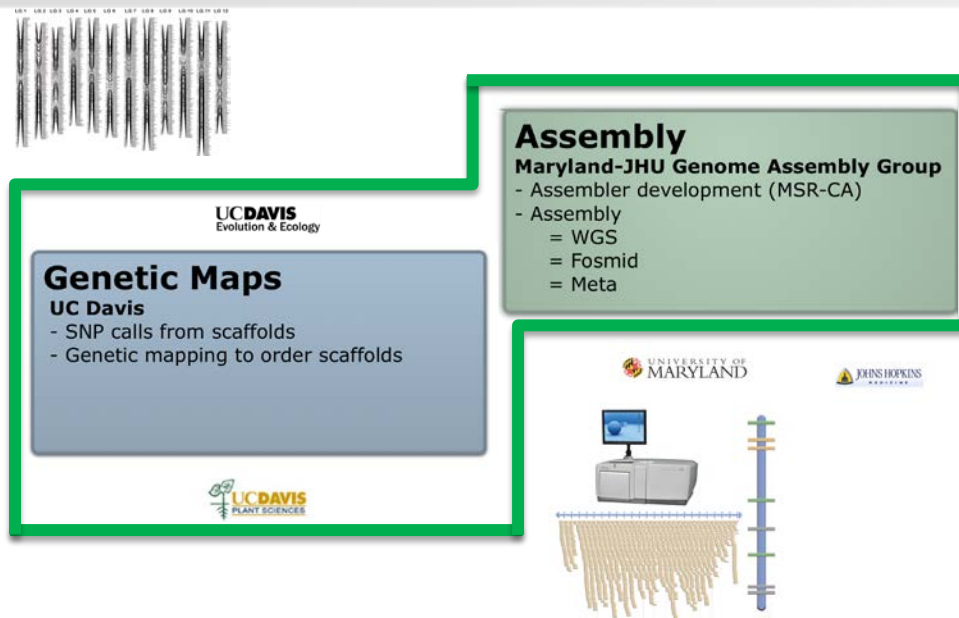

Scaffold anchoring and orientation

Anchoring ADEPT2 Loci to the Genome

- We aligned 5599 ADEPT2 loci to the Loblolly pine assembly v0.8
 - BLAST + MUSCLE
 - Filtered for 99% identity and 99% coverage
 - 5009 loci met filtering criteria (90%)
- For 3733 of the 5009 aligned loci the genome exactly matches one or more haplotypes of the diversity panel.

Preliminary estimation of scaffold anchoring and orientation

1635 SNPs from Adept2 aligned to genome

1096 SNPs aligned alone to a scaffold

539 SNPs aligned with another SNP to a scaffold

WGS Scaffolds

- Based on the number of markers assigned, scaffolds can be hierarchically classified into not-ordered, ordered, oriented, and validated
 - 1333 WGS scaffolds were ordered by this map
 - 242 WGS scaffolds were also oriented
 - 43 WGS scaffolds were also validated

Example of validated scaffold

Scf7180063292642

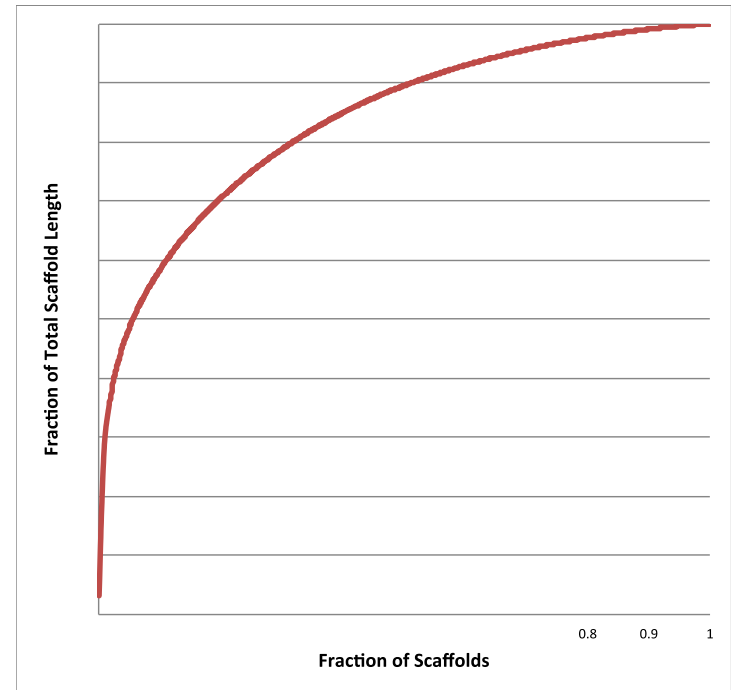

scf7180062681291

WGS Scaffolds

- 96,628,871 bp are ordered
- Most of the ordered scaffolds are short
 - 50% of the total length is in 5.6% of the scaffolds.

- Total length is less than 1% of the 22Gb assembly.

Conclusion

...the puzzle is incomplete.

BUT....

...a much higher density map is under development...
